

ABSTRAC

These days with many is big company and factory, needed by system of good and presensi observation . Resistance which is often faced in iife human being is time efficiency, and surely in the world of modern of efficiency always become the priority. For the data of repeat the employees every day require a lot of time and energy and also consume the supporter goods which is a lot of. For example for the data of employees every day in big institution of goodness of school and also company needed by a special employees handling this problem. Is required by a paper which is a lot of to write the employees data or iis possible required by a conventional record-keeping system or do not automatically

system of Absence contactless by RFID (Radio of Frequency Identification) assisting company to economize the energy which handling of problem presensi. Data taken by more accurate with the security system which can vie with the other technology contactless for example with the fingerprint which its expense is very costly

By using this absence contactless system is company do not have to provide the paper and ink which is a lot of to note its employees. And so do can economize the moment time process the record-keeping, because employees needn't touch the appliance, can be detected in distance more or less 12 cm
