Penelitian ini bertujuan ingin mengetahui; 1. Hubungan antara Perhatian Orang Tua dan Iklim Sekolah Dengan Disiplin Pada Siswa SMP N 2 Padang Tualang Hipotesis yang diajukan ; Hubungan antara Perhatian Orang Tua dan Iklim Sekolah Dengan Disiplin Pada Siswa SMP N 2 Padang Tualang

Pengumpulan data menggunakan metode skala, yaitu skala disiplin, skala perhatian orang tua dan skala iklim sekolah. Sebelum digunakan dalam penelitian ketiga skala diujicobakan kepada 40 orang siswa. Sampel penelitian berjumlah 60 orang siswa dengan tehnik pengambilan sampel adalah random sampling. Data yang diperoleh dianalisis dengan tehnik Analisa Regresi.

Hasil penelitian 1. Ada hubungan yang signifikan antara perhatian orang tua dan iklim sekolah dengan disiplin. Hal ini ditunjukkan koefisien  $F_{reg} = 205,969$ ;  $p < 0,001$  ; Berdasarkan hasil penelitian ini, maka hipotesis yang diajukan dinyatakan diterima. 2. Ada hubungan positif yang signifikan antara perhatian orang tua dengan disiplin pada siswa SMP N 2 Padang Tualang dengan sumbangan 84,4%. 3. Ada hubungan positif yang signifikan antara iklim sekolah dengan disiplin, sumbangan efektif yang didapatkan sebesar 75,0%. Total sumbangan efektif dari kedua variabel bebas (perhatian orang tua dan iklim sekolah) dengan disiplin sebesar 87,8%. Dari hasil ini diketahui bahwa masih terdapat 12,2% kontribusi dari faktor lain terhadap disiplin. Diketahui bahwa subjek penelitian ini para siswa SMP N 2 Padang Tualang, memiliki perhatian orang tua yang tergolong rata-rata baik dan memiliki iklim sekolah yang tergolong rata-rata baik dan disiplin yang tergolong rata-rata rendah.

Kata kunci : Disiplin, perhatian orang tua dan iklim sekolah

## ABSTRACT

Relations Attention Parents And School Climate With Discipline Students of SMP N 2 Padang Tualang Langkat

This study aims to find; 1. The relationship between Attention Parents and School Climate With Discipline Students of SMP N 2 Padang Tualang The hypothesis; The relationship between Attention Parents and School Climate With Discipline Students of SMP N 2 Padang Tualang

Data collection using a scale, the scale of discipline, scale the attention of parents and school climate scale. Before being used in the third study tested scale to 40 students. These samples included 60 students with a sampling technique is random sampling. Data were analyzed with regression analysis techniques.

Results of research 1. There was a significant relationship between parental supervision and discipline of the school climate. This is shown Freg coefficient = 205.969;  $p < 0.001$ ; Based on these results, the hypothesis are accepted. 2. There was a significant positive correlation between parents' attention to the discipline of the students of SMP N 2 Padang Tualang with 84.4% contribution. 3. There was a significant positive relationship between school climate with discipline, effective contribution obtained for 75.0%. Total effective contribution of the two independent variables (the attention of parents and school climate) with the discipline of 87.8%. From these results it is known that there is still a 12.2% contribution to the discipline of other factors. It is known that the subject of this study students of SMP N 2 Padang Tualang, have the attention of parents who belong to a good average and has a school climate relatively good average and discipline are classified as low average.

Keywords: Discipline, parental and school climate
